ChatGPT ▾

I want to create a full stack python application which can help me understand that how can i start application from beginner to advance level of features, covers basics and advance. first think before responding, do not executing yet. Instead of ask me clarifying (use AskUserQuestion) so we can refine the approach together step by step before proceeding the final one

↑ Share ...

Good approach. Before deciding the project, we should design it so that it grows with your learning journey:

Level 1 → Beginner

- Python fundamentals
- Flask/FastAPI basics
- CRUD operations
- HTML/CSS
- SQLite
- Authentication

Level 2 → Intermediate

- PostgreSQL
- REST APIs
- JWT Authentication
- File uploads
- Pagination
- Search & Filtering
- Background jobs

Level 3 → Advanced

- Docker
- Redis
- Caching
- Celery
- Microservices concepts
- WebSockets
- CI/CD
- Cloud deployment

Level 4 → AI/GenAI Integration

- RAG
- Vector Database
- LLM Integration
- AI Agents
- Document Processing

Since your goal is becoming a GenAI Engineer, the project should ideally evolve from a normal full-stack application into an AI-powered system.

AskUserQuestion #1

Which type of application would you be most interested in building for the next few months?

Choose one:

A. AI Learning Management System

- Courses
- Notes
- Quizzes
- AI Tutor
- Progress Tracking

B. Job Tracker + AI Career Assistant

- Track applications
- Resume management
- Interview preparation
- AI Resume Reviewer
- AI Mock Interviewer

C. SaaS Project Management Tool

- Teams
- Tasks
- Kanban Board
- Notifications
- Analytics

D. Knowledge Base / Second Brain

- Notes
- Documents
- Search
- RAG Chatbot
- AI Knowledge Assistant

E. E-commerce Platform

- Products
- Orders

- Payments
- Inventory
- Recommendation Engine

F. Custom Idea

- Tell me your own idea.

AskUserQuestion #2

What backend framework do you want to learn deeply?

1. Flask
2. FastAPI
3. Django
4. No preference (recommend best option)

AskUserQuestion #3

How much time can you invest weekly?

- 5–10 hrs
- 10–20 hrs
- 20–30 hrs
- 30+ hrs

Reply in this format:

Project: A/B/C/D/E/F

Backend: Flask/FastAPI/Django/No Preference

Weekly Time: X hrs

After that, I'll design a complete roadmap where each phase introduces new concepts, architecture improvements, database changes, testing, deployment, system design, and eventually GenAI features—so you learn beginner → advanced development through one evolving application.
